Purpose: Prepares the body for high-intensity activity, increases blood flow, and improves flexibility.

Example exercises:

Jogging or butt kicks

High knees

Lateral shuffles

Leg swings (forward and side)

Arm circles

Strength and power training

This portion focuses on explosive power, which is essential for defensive backs.

Power cleans: Targets the entire body to build explosive power from the ground up.

Box jumps: Increases the explosive power in the glutes, quads, and calves.

Barbell squats: Develops lower body strength and power for explosive movements and tackling.

Deadlifts: Works the posterior chain, including the hamstrings and glutes, which is critical for sprinting and powerful movements.

Bench press: Builds upper body strength for fighting off blocks and jamming receivers.

Pull-ups: Improves overall upper body strength.

Speed and agility training

These drills are designed to improve acceleration, change of direction, and lateral speed, which are crucial for the defensive back position.

W-Drill: Improves footwork and quick changes in direction.
Cone drills: Enhances agility and speed. These drills involve running around and cutting between a series of cones.
Agility ladder drills: Improves quickness, footwork, and coordination.
Sled pushes or pulls: Increases acceleration and leg drive.
Interval sprints: Mimics the bursts of speed needed during a football game. A common method is sprinting for 20 seconds, then resting or jogging for a set period.
Position-specific drills
This training category hones the skills specific to a defensive back.
Backpedal to sprint: Teaches the transition from backpedaling in coverage to sprinting forward to break on a ball.
Hip flips: This drill, often involving cones or hurdles, focuses on quickly and efficiently flipping the hips to change direction and stay with a receiver.
Box Drill: Emphasizes press technique at the line of scrimmage, including footwork, hand placement, and quick adjustments.
Reaction drills: Drills that require reacting to a thrown football to simulate game situations.
Recovery and flexibility
Stretching and foam rolling: Performed after the workout to help reduce muscle soreness and increase flexibility.
Yoga and mobility work: Incorporated into the routine to improve range of motion and aid in injury prevention.
